

# NATIONAL SEMICONDUCTOR CORPORATION

## ETHERNODE 16ATX

<b>NIC Type</b>	Ethernet
<b>Transfer Rate</b>	10Mbps
<b>Data Bus</b>	8/16-bit ISA
<b>Topology</b>	Linear Bus
<b>Wiring Type</b>	RG--58A/U 50ohm coaxial
	AUI transceiver via DB-15 port
<b>Boot ROM</b>	Available

CARD IDENTIFICATION NUMBER				
Number	JP1A	JP1B	JP1C	JP1D
1	Open	Open	Open	Closed
2	Open	Open	Closed	Open
3	Open	Closed	Open	Open
4	Closed	Open	Open	Open

Note: Up to four NICs can be installed in a single system. If more than one card is installed, each card must have a different Identification number.

NETWORK SEGMENT LENGTH NOTES
The segment length is automatically detected and configured on this card, but may not be on other cards on the network segment. All NICs on the network segment must have this option set the same.

DATA BUS SPEED NOTES
On some systems the data bus timing is not truly IBM PC/AT compatible. If the card is not initializing, Changing the data bus speed from 'Normal' to 'Fast' may allow the card to operate properly. To change the data bus speed you must use the ICRCNFIG utility that comes with the card.

BOOT ROM/CHECKPOINT SECURITY CHIP NOTES
The boot ROM socket accepts an 8K boot ROM or a CheckPoint security chip. The CheckPoint security chip supplies virus protection, access control, and access logging functions.
