Note: The values in this table are only valid if no option board memory is used for backfill and no 384K offset is used. To set starting memory address if backfill or 384K offset is used, set SW2 to the correct value. SW2/1 is the most significant bit and SW2/4 is the least significant bit. The switches have the following values: SW2/1=512KB, SW2/2=1024KB, SW2/3=2048KB, and SW2/4=4096KB. Turn the switches on and add the values to set the starting memory address. (On=1, Off=0)
